

For high-speed bottling lines: choose THE EXPERTS! Ensure performance, savings, and sustainability

EMEA high-speed bottling lines growing market needs expertise

In the Middle East and UAE soft-drinks and bottled water markets are projected to grow by 5 to 6% in the coming 5 years (*source Euromonitor*). **To meet this growing demand, OEM's are designing turnkey high-speed lines. Turnkey should not mean "one supplier for all equipments".** Customers still have the choice to benefit from expert suppliers understanding their specific needs and offering adapted solutions.

Success on high-speed lines requires a focus on maximum output: ensure specific commitment on hygiene, food safety and avoid stoppages due for i.e. to improper capping or labelling. When it comes to producing with higher sustainability level too, saving water, avoiding chemicals, reducing packaging material weight, **THE EXPERTS are one step ahead the OEM's** who cannot invest in all technologies simultaneously.

Gulfood Manufacturing, the right place to meet THE EXPERTS

For the major event of Gulfood Manufacturing, 4 French companies: ICE Water Management, Claranor, Zalkin and Sleever, are teaming up on one common booth. All offer the best available technologies in their field for high-speed filling lines. On THE EXPERTS' booth they will present their expertise and solutions.

Ensure performance, savings, and sustainability with THE EXPERTS!

ICE Water Management, specialist of water management, offers solutions to enhance quality and ensure water savings at each step of the process. Water savings is the key interest for bottlers. A digital solution such as **ICE Connect helps to reduce water consumption up to 15% and increase production line availability up to 10%.**

With the **Pulsed Light Technology**, **Claranor** offers the **best compromise** between high speed treatment and high efficiency **for inline packaging sterilization**. The equipments for cap and preform treatment operate water-free, chemical free, with a very low operation cost of 25\$/million cap. Used on ultra-clean lines, Pulsed Light enables to produce **without ozone**.

Zalkin provides high-performance tailor-made capping solutions and collaborates with several major bottled water companies in providing solutions to bottling water using lightweight, thinner, smaller containers and caps. **In addition to sustainability substantial cost savings can be achieved: an estimated 1/3 less plastic.**

With its **exclusive LDPET product**, innovative shrink-sleeve pioneer **Sleeve International**, enables beverage producers to ensure clear PET bottle recyclability whilst maintaining premium product differentiation. Sleeve's unique vertical integration offers **an innovative product/machine solution LDPET® - Combisteam LDPET® for optimal performance, reduced energy consumption by 60%.**

Choose the best-in-class equipment with the **EXPERTS!**

By offering tailor-made solutions, THE EXPERTS allow beverage manufacturers to enhance performances, savings and sustainability on high-speed filling lines, even if integrated by the largest OEM's.
