

DROP by DROP (by ICE) to monitor, manage and optimise performances of your plants.

DROP by DROP (by ICE) is a web-based tool that helps you make decisions and improve water treatment productivity.

DROP by DROP collects data throughout the process, from the well to the filling line and analyses them. It acts as a continuous improvement and prediction tool that gives a real-time and remote overview of production.

By getting involved at every stage of the process, **DROP by DROP** provides complete optimisation of performance. In addition to overall monitoring, it prescribes corrective action. Reports are generated automatically, and alerts are sent to the various parties involved, providing real-time support from line operator to the executive management without forgetting the site management.

This tool helps with preventive maintenance to optimise operating costs and avoid production shutdowns.

About us:

As a major player in consultancy, engineering and equipment for the water industry in the agri-food and pharmaceutical sectors, ICE is a company recognised internationally for its innovations and the quality of its services. We design, manufacture and commission customised water treatment systems. Our main export markets are Asia, the Middle East, Africa and Europe.

For 38 years, ICE Water Management has been designing turnkey projects from well to filler inlet and CIP, including engineering, equipment, installation, services and audits. Our technologies can also be applied to RE-USE, the reuse of process water for utilities.

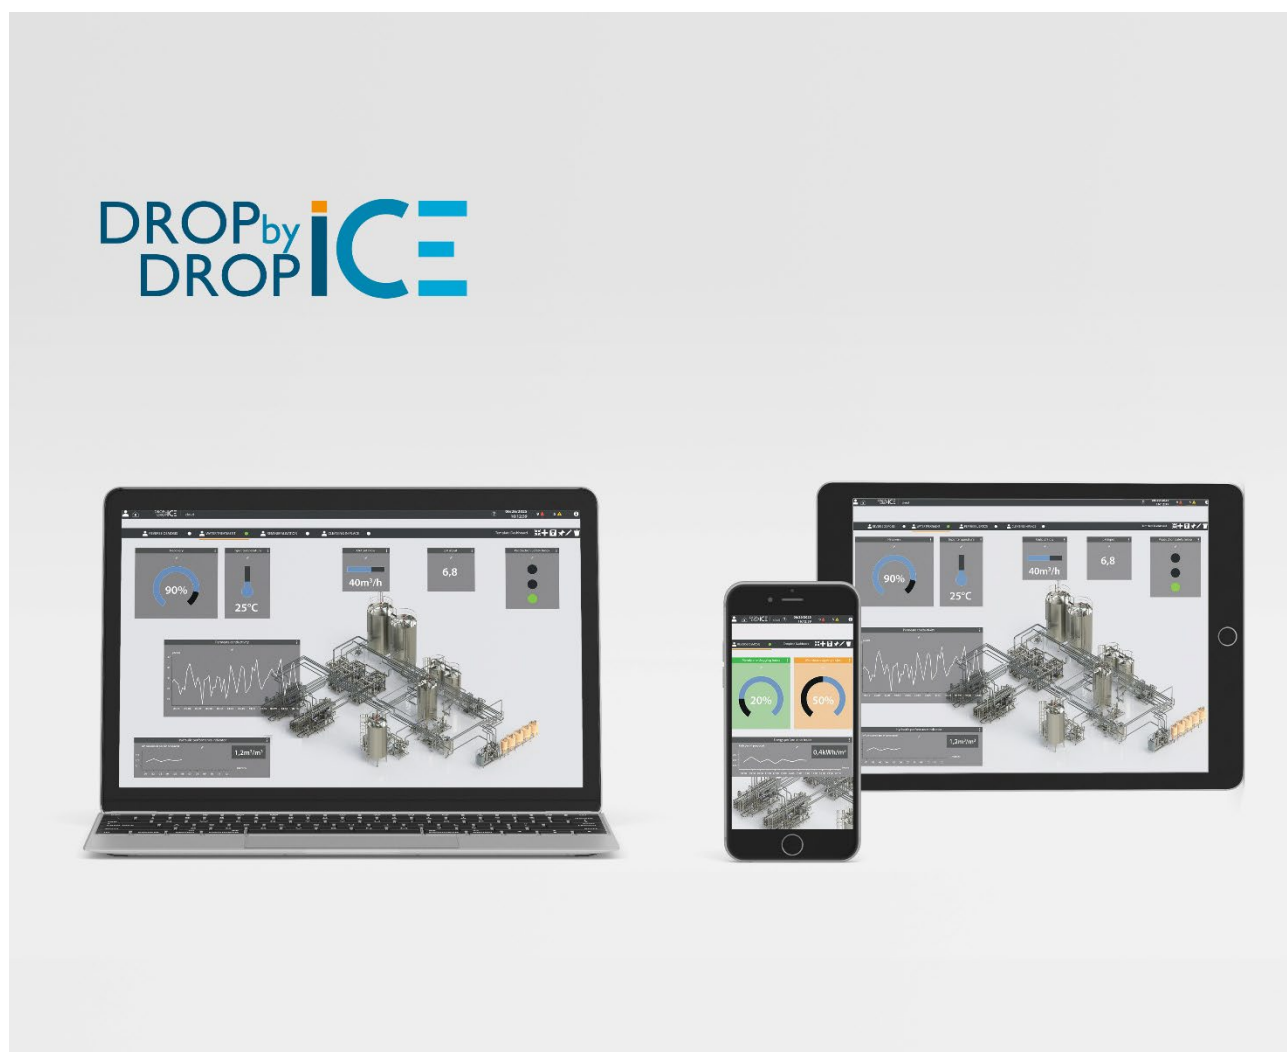

ICE Water Management is a key partner for many of the world's leading industrial companies.
